Inspiring Love of Math with McGraw-Hill My Math

McGraw-Hill My Math engages and inspires lifelong learning of math by giving students and teachers the digital and personalization tools that make challenging assignments fun while still meeting the expectations of the Common Core.

“The kids love having their own books to write in,” Gaster says. Tools such as write-in books; Foldables®

and foam manipulatives; modern, to-the-point games; and videos capture students’ attention and give students new ways to visualize and find ways to make math classes their own.

This hands-on, personalized approach to math class leads to many more ah-hah moments for students, helping the lesson “click” and come to life, according to Gaster.

“We experience an increase in math scores every year.”
